Project Euler #43: Sub-string divisibility

This problem is a programming version of Problem 43 from projecteuler.net

The number, 1406357289, is a 0 to 9 pandigital number because it is made up of each of the digits 0 to 9 in some order, but it also has a rather interesting sub-string divisibility property.

Let d_1 be the 1^{st} digit, d_2 be the 2^{nd} digit, and so on. In this way, we note the following:
$$\begin{align*} & d_2d_3d_4 \text{ is divisible by 2} \\ & d_3d_4d_5 \text{ is divisible by 3} \\ & d_4d_5d_6 \text{ is divisible by 5} \\ & d_5d_6d_7 \text{ is divisible by 7} \\ & d_6d_7d_8 \text{ is divisible by 11} \\ & d_7d_8d_9 \text{ is divisible by 13} \\ & d_8d_9d_{10} \text{ is divisible by 17} \end{align*}$$

Find the sum of all 0 to N pandigital numbers with this property.

Input Format
Input contains an integer N

Output Format
Print the answer corresponding to the test case.

Constraints
$3 \le N \le 9$

Sample Input

```
3
```

Sample Output

```
22212
```
