

Project Euler #28: Number spiral diagonals

This problem is a programming version of [Problem 28](#) from [projecteuler.net](#)

Starting with the number 1 and moving to the right in a clockwise direction a 5 by 5 spiral is formed as follows:

```

\begin{array}{ccccc}
\textbf{21} & 22 & 23 & 24 & \textbf{25} \\
20 & \textbf{7} & 8 & \textbf{9} & 10 \\
19 & 6 & \textbf{1} & 2 & 11 \\
18 & \textbf{5} & 4 & \textbf{3} & 12 \\
\textbf{13} & 16 & 15 & 14 & \textbf{17}
\end{array}

```

It can be verified that the sum of the numbers on the diagonals is 101.
What is the sum of the numbers on the diagonals in a $N \times N$, (N is odd) spiral formed in the same way?
As the sum will be huge you have to print the result mod $(10^9 + 7)$

Input Format

The first line contains an integer T , i.e., number of test cases.
Next T lines will contain an integer N .

Output Format

Print the values corresponding to each test case.

Constraints

$1 \leq T \leq 10^5$
 $1 \leq N < 10^{18}$, {N is odd}

Sample Input

```

2
3
5

```

Sample Output

```

25
101

```
